

FLEXIBLE PAPER MANAGEMENT SYSTEMS

WHEN SUDDENLY EVERYTHING IS ALL ABOUT YOUR WISHES.

It all began 50 years ago with a clear concept: To develop and produce the most flexible machines for document handling.

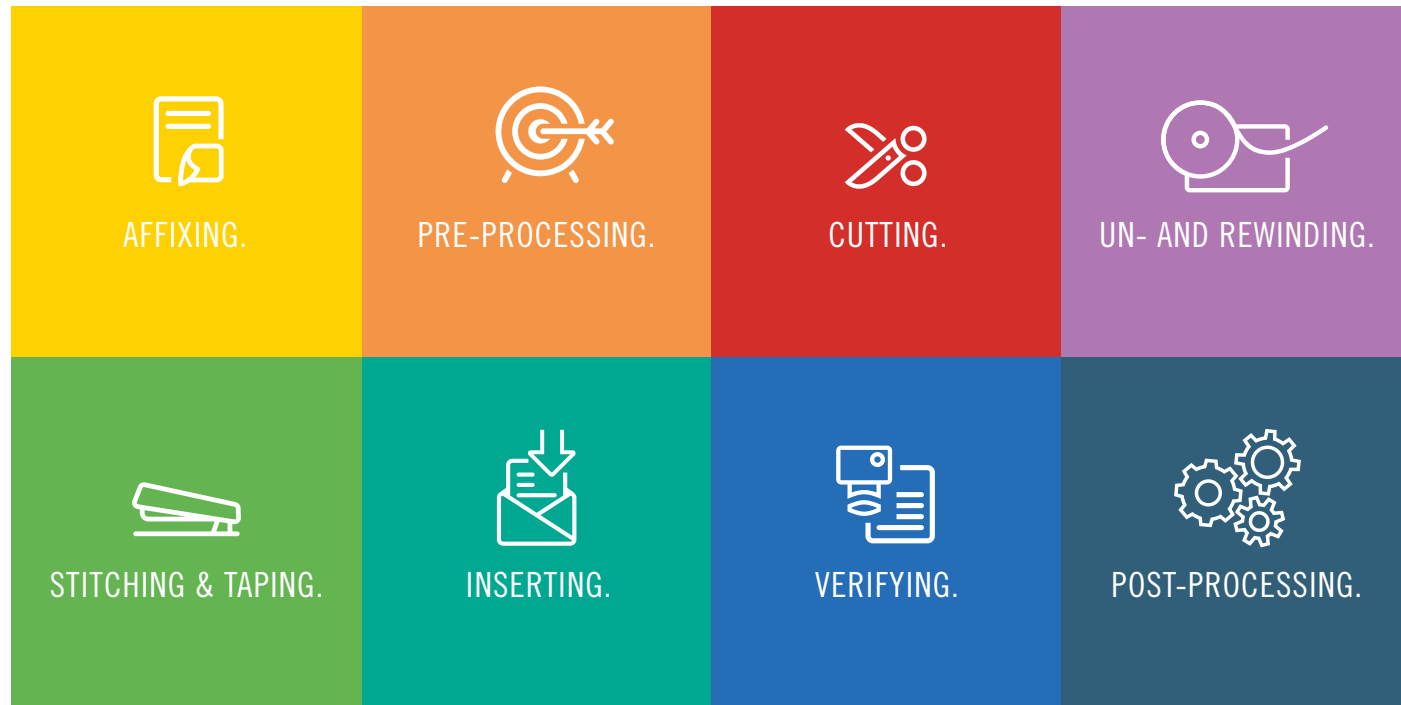

What followed were the first automated IT-controlled cutting machines, inserters and a wide range of products within our unique modular system.

From the beginning we develop and produce almost all of our components from mechanics to electronics up to software under one roof – that you will always get the paper management system you need. Now and in the future.

MÜLLER. LOCALLY GLOBAL. Established in 1965 by founding owner Manfred Müller, Müller today is a state-of-the-art company, which preserves the rich traditions of a family enterprise: In-house construction and production for optimized workflows and therefore reduces on cost. Efficient and flexible structures enable the company to react to trends immediately.

COMPETENCE

FREELY COMBINABLE.

The portfolio of Müller comprises eight product segments from applying cards to inserting up to the verification of documents.

State-of-the-art technology and high reliability for a wide variety of requirements within pinfeed or pinless processing, whatever the paper format is: single sheet, stack, roll or online from the printer. Numerous options, which can be expanded also to systems of other suppliers, allow a nearly limitless spectrum of applications.

SOFTWARE. No question: Paper management systems are highly complex. To oversee all processes at a glance Müller developed the MÜLLER INTERACTIVE CONTROL UNIT (MICCU). A large 2D-overview screen showing the status of all engaged modules. Thanks to a highly intuitive menu navigation, supervision, adaption and parameterization of the systems are user-friendly.

FLEXIBILITY

HIGHEST FLEXIBILITY – TODAY AND TOMORROW.

From more than 100 combinable modules, we create the appropriate paper management system according to all of your requirements. Our modules are not only combinable with each other, but also match with existing systems with ease. You want to carry out a new product idea in a very short period of time? Fine, the modular components can be swapped out and changed easily. Lettershops become output centers for statements with extensive documentation. Capacity utilization of CRDs is assured by additional direct mail.

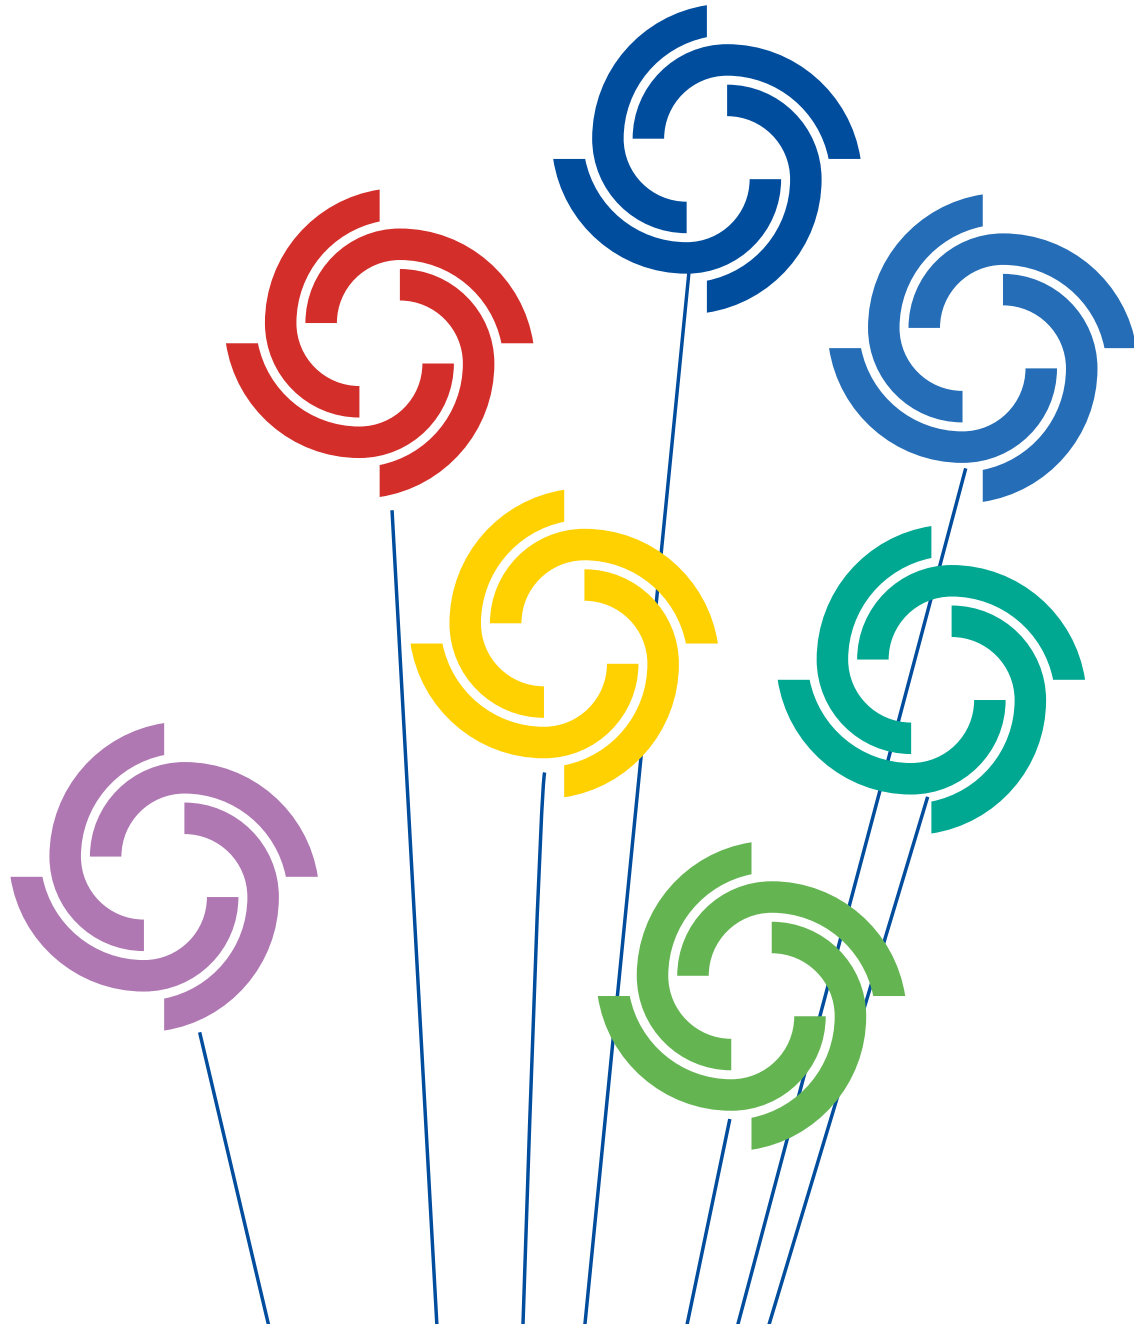

Prepare yourself for the future today.

PROCESS. Our quality process comprises a multi-level procedure up to the testing of the whole system. The costum-tailored system is put to the acid test with the client's application. Single parameters will be customized, such as the adjustment of sensors and the positioning of cameras. The final step in the quality process also includes the acceptance test with our clients.

ASSEMBLY. All modules are produced according to order and tested completely.
Each production station assembles multiple different modules. This is part of our whole concept, to complete everything under one roof from the development up to the finished product.

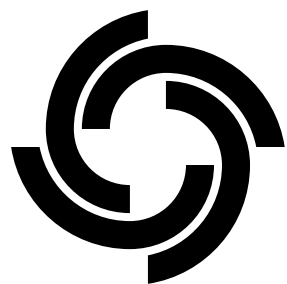

INDEPENDENCY

MÜLLER. SIMPLY INDEPENDENT.

Since the beginning of the company's history, Müller has one objective: To be as independent as possible from suppliers in the production of paper management systems. Key elements for this independence are our own software solutions and the in-house production of most items, boards and wire harnesses. This not only speeds up the development of the systems. At any time we can produce spare parts and so our systems can stay in operation for decades.

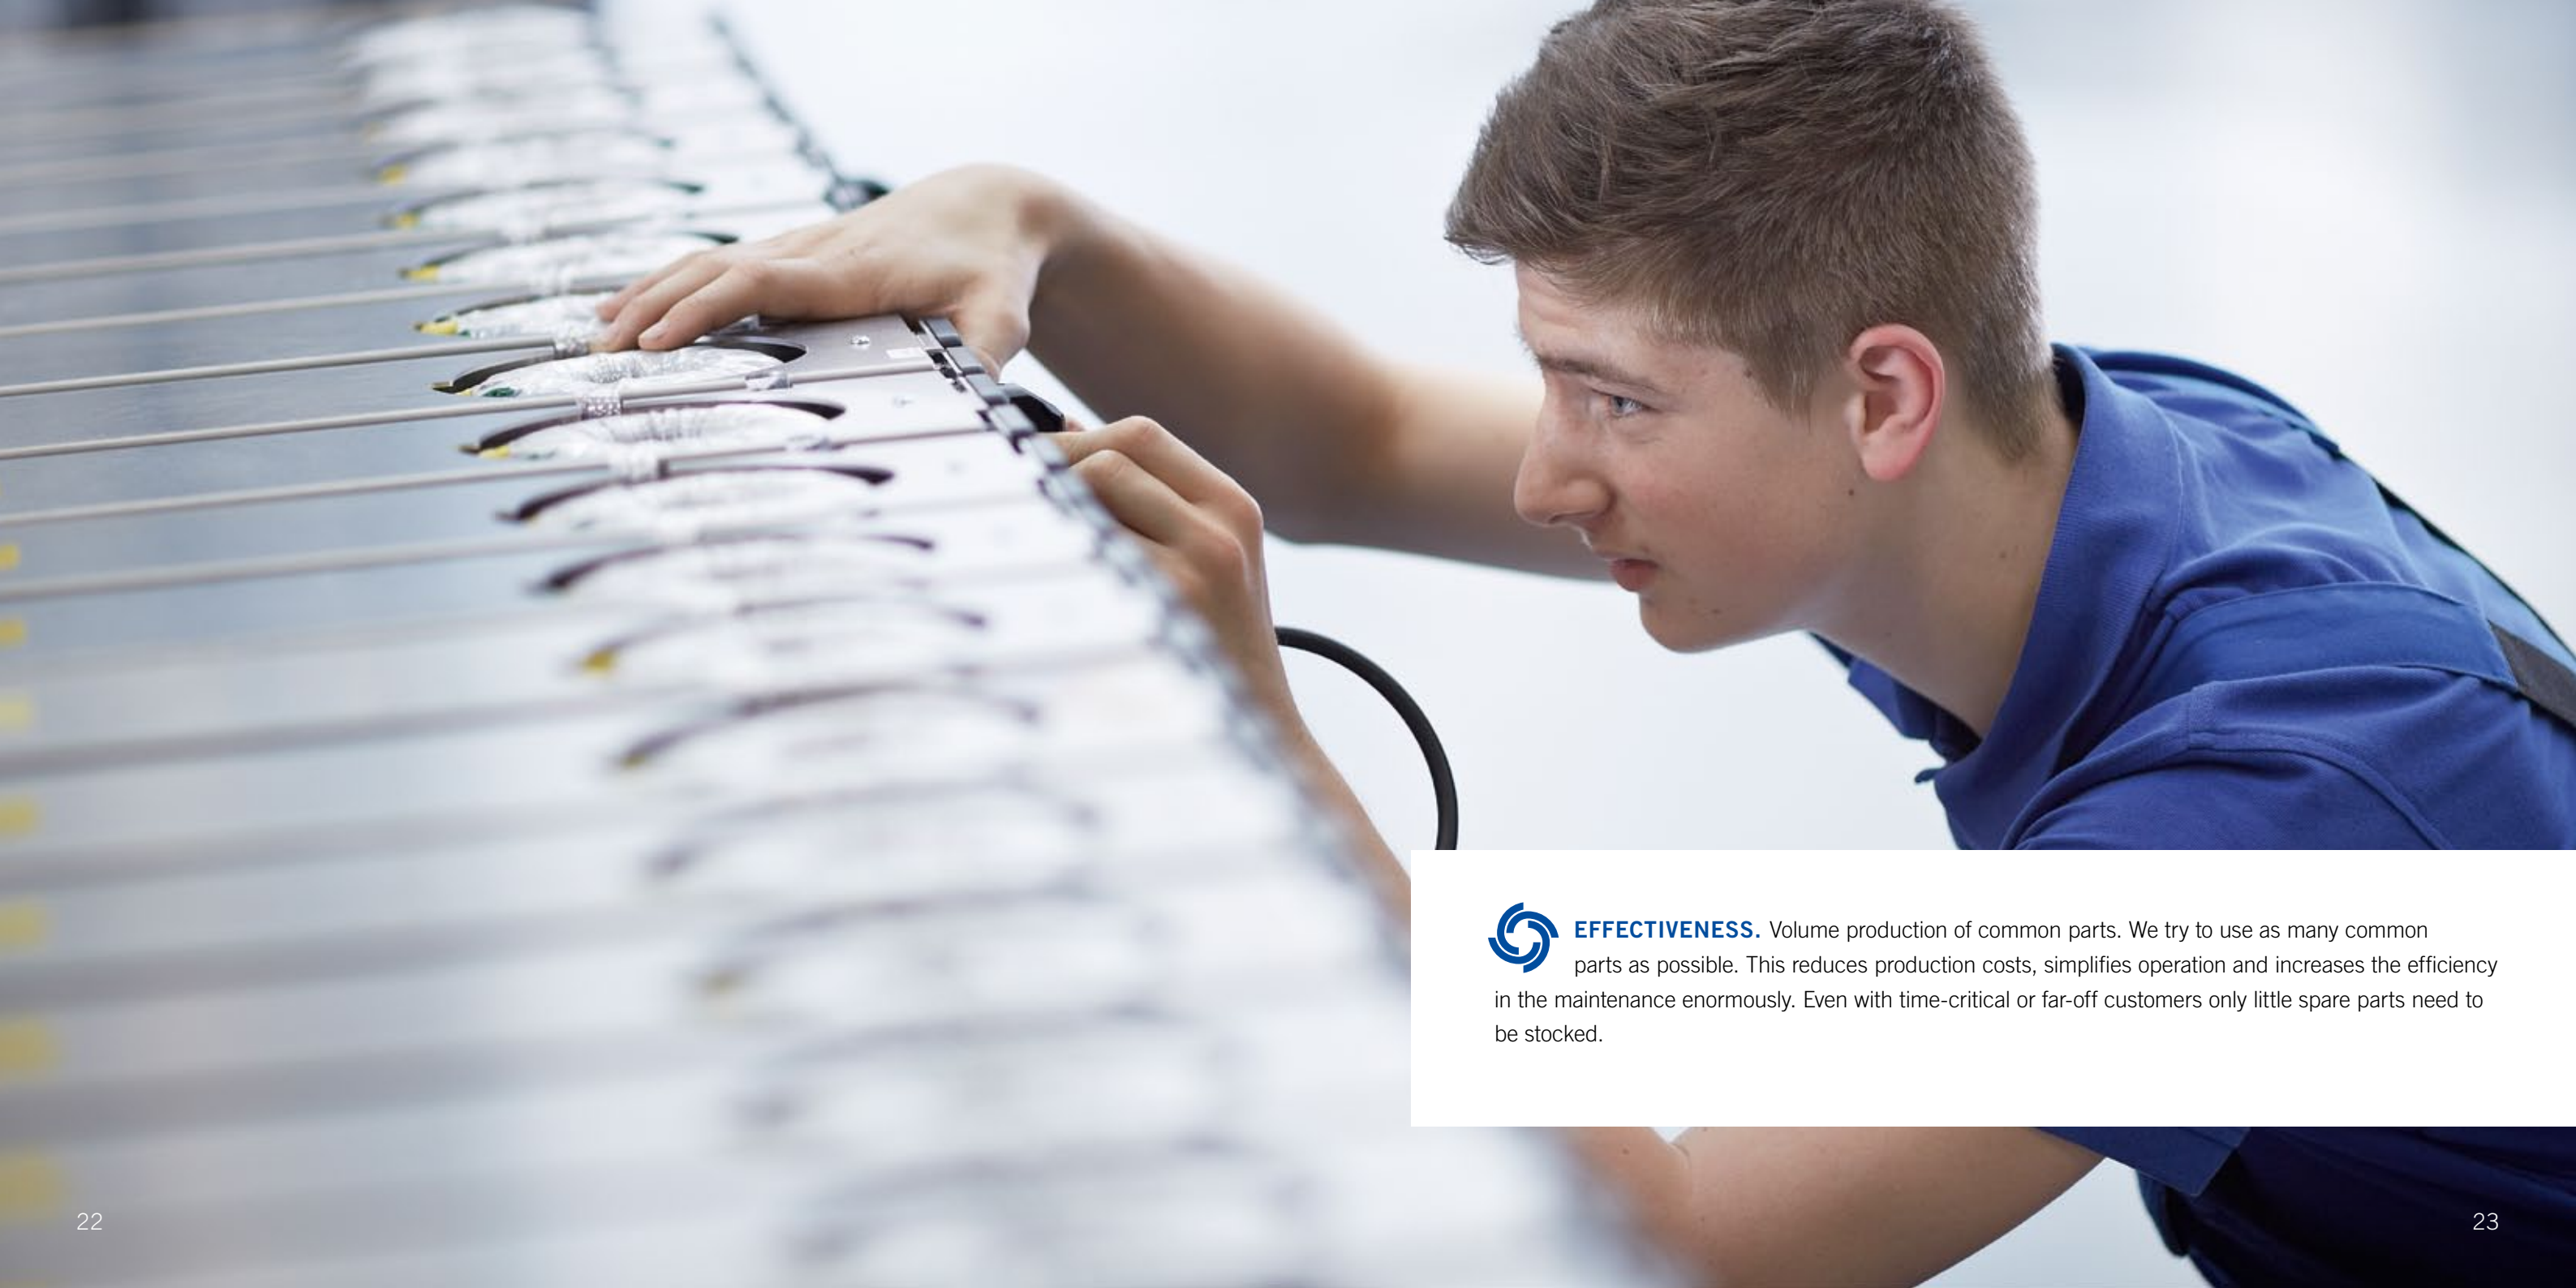

ACCURACY. Whether it is pulleys for engines, engine blocks, housing of folding machines, etc.:
A system provides the desired output only if each item is made extremely precise. Our modern
rotary milling machines are an example of production facilities at the highest technical level.

QUALITY

MADE@KRANZBERG. MADE IN GERMANY.

We remain true to this quality. From the mechanics and electronics to the software we produce consistently in our own country and to the highest German quality standards. This means: Maximum precision thanks to well-trained professionals, state-of-the-art equipment and quality materials. Thus we spare you unnecessary downtime and increase your productivity. This is also highly appreciated by our many international customers.

EFFECTIVENESS. Volume production of common parts. We try to use as many common parts as possible. This reduces production costs, simplifies operation and increases the efficiency in the maintenance enormously. Even with time-critical or far-off customers only little spare parts need to be stocked.

COMPETENCE

DIN LONG IN SHORT SPELL.

Verify, merge, into the envelope, finished: Whether you want to go for a new, individualized system or complement an existing system – with the intelligent inserting system Müller Series 7000, 8000, 9000 you make all sites to an output factory.

The systems combine intelligent processes as the data comparison between all channels, control of the post boxes and the air suction and friction feeders. You will carry out all of your mailings posthaste.

VERIFY. With many thousand cycles per hour and several shifts a day, each part must be exactly right. For this purpose, we measure all the parts again in order to ensure their durability in daily use. The entire system is only as strong as its individual parts. That's why we leave nothing to chance.

TRAINING. 50 years of experience in the development and production of paper management systems – we are happy to share this know-how. With two different apprenticeships we are actively investing in the future of young people in Germany. That former apprentices come back again after further external trainings, confirms our company's philosophy.

QUALITY

SUSTAINABILITY.

Only a resource-efficient management is sustainable. All our systems are built to last. High-quality materials, repairable and serviceable items and an intelligent overall design of our systems allow permanently smooth and flexible use. Changes in your production processes do not need a complete change of systems, but only individual components have to be replaced thanks to the modular character.

Incidentally, the issue of sustainability concerns not only our products. Our production facilities are equipped with a variety of measures for an optimal energy balance.

ECONOMICAL. A private block heating station produces electricity and heat, triple glazing and highly thermally insulating facade elements stop unnecessary heat loss, an automatic light control system reduces power consumption when the sun shines sufficiently. On top, we only use energy-efficient PCs and floor printers. As a matter of course, we carefully separate the waste. We live sustainability. Every day.

INTELLIGENT SOLUTIONS AROUND PAPER MANAGEMENT.

Times are changing with increasing speed. What remains stable is the wish for consistency – and for flexibility at the same time. The flexible paper management systems by Müller make these wishes come true. For costumers in the corporate as well as in the commercial market. Contact us!
